

ARTSYL

OrderAction Smart Process Application for Sales Orders Automation

Powerful, Easy-to-Implement Sales Order Automation

- Accelerate & Automate Your Sales Order Process
- Achieve Greater Productivity and Process Control Over Sales Orders
- Stand-alone or integrated with your ERP/CRM/ECM/LOB System

Create a Complete, End-to-End Automated Sales Order Process
that Leverages Your Existing Systems

Looking for a better way to gain control over your Sales Order process to better manage business KPIs while boosting productivity and lowering costs? **OrderAction** from **Artsyl Technologies** provides a seamless industry-leading Sales Order automation solution specifically designed to eliminate the most painful, manual steps in your Sales Order process.

OrderAction is a smart process application that incorporates intelligent capture technology to extract

data from your business documents, plus automated workflow functionality, ERP/CRM/LOB integration for data validation, automated transaction entry and enterprise content management integration.

Build upon the foundation of **Artsyl Technologies' docAlpha** digital transformation platform, **OrderAction** is designed for maximum flexibility and optimal performance, so it can adapt as your company grows and your processes evolve.

Eliminate Data Entry and Reduce Errors

OrderAction's intelligent capture functionality transforms Sales Order documents into transaction data automatically - eliminating manual data entry. By

connecting to your ERP system, **OrderAction** cross-checks data against your business system records to ensure accuracy and identify potential duplicate orders.

Transform Order Line Item Details into Buyer Behavior Data

By intelligently extracting both header and line item details from customer orders, **OrderAction** allows organizations to gather timely information about

buyer behaviors and trends, while accelerating the sales order process and reducing days sales outstanding.

Eliminate Exceptions and Errors with Automated Workflow

With **OrderAction**, you have the flexibility to rely on the solution's built-in workflow capabilities or to leverage the workflow functionality of your ERP or ECM systems. The solution's automated approval workflow routes orders to one or multiple approvers based on your business rules,

accelerating the validation/approval process while providing an instant audit trail.

To eliminate workflow bottlenecks, **OrderAction** can deliver automated alerts and reminders when approvers have exceeded a time threshold.

Boost Productivity with Automatic Transaction Entry

At the end of the process, **OrderAction's** ERP system connectivity takes the pain out of transaction entry by

automating the creation of approved order records in your ERP system, with a complete audit trail.

OrderAction ERP Connector Benefits

- Flexible, easy to implement ERP/ECM system connectivity
- Dramatically reduces data entry errors
- Reduces Sales Order cycle times by automating transaction entry
- Delivers greater cash flow/other Sales Order KPI visibility with real time reporting

Take the Next Step and Learn How to Get More Out of Your Existing Systems and Processes to Elevate & Accelerate Your Sales Order Process!
